SPAX Adjustable Ride height Suspension Kit for VW Golf VR6 Mk3

The VR6 engined Golf may have the edge over other Golfs of that era, but the same cannot be said for its handling. The heavy VR6 engine causes problems that even most of the aftermarket suspension kits available for this car have failed to address.

Now SPAX Performance Ltd have teamed up with leading VW tuners Eurotek and developed a height and damper rate adjustable suspension kit specifically for the VR6. They started with a 'clean sheet' rather than using the existing Golf pattern suspension and developed a kit that has the correct spring rates and damper settings for this car.

The SPAX adjustable suspension kit for the Golf VR6 is height adjustable at the front and rear. The kit offers a real improvement in suspension 'feel' and handling, the ability to lower the car to give the stance most owners seek and still offer it at an **affordable price**.

The SPAX kit contains **2 rate and height adjustable coil over front struts and 2 rate adjustable dampers** with race internals and **chrome silicon springs with height adjustable seats for the rear**. The use of 2.25" springs allows larger diameter wheels to be fitted if required without fouling the suspension. The ride height drop is adjustable from 30mm to 60mm for road and race purposes but lowering of up to 80mm can be achieved with this kit, although such extreme lowering is really only for show use.

All damping adjustments can be carried out **on the car** for quick, easy and precise tuning of suspension settings and the ride height can be adjusted by use of the 'C' spanners provided.

SPAX quality is universally well known. SPAX is one of the very few British companies (in any field of manufacturing - not just the motor industry!) to have achieved **German TUV approval**.

Each SPAX kit is dyno tested to ensure quality and performance before it leaves the factory and all dampers feature the unique **SPAX triple wiper seal design** to ensure a long leak-free life.
