SPAX One-off Adjustable Dampers

SPAX Performance Ltd are well known for their model specific uprated and adjustable suspension kits. Few people realise that they offer a specialist one-off service making adjustable suspension dampers for just about any vehicle.

The ride height adjustable and damping rate adjustable shock absorber shown here was made for George Polley's Hot Rod and

was specially designed to cope with the peculiar demands of the short oval track where the car is always turning in the same direction - but that's just one example. The most famous one-off SPAX dampers ever, were fitted to the Thrust SSC land speed record car, but SPAX would be equally able to supply dampers for a 5 mph earth mover if required to do so.

One thing you can be sure of, and that's whatever the task SPAX will be up to it. **SPAX** dampers feature triple valve seals to make absolutely sure that they don't leak and each and every one is computer dyno tested prior to leaving the factory.

SPAX dampers are finished with an oven baked powder coating. That is the best finish a damper can possibly have. It is far superior to both the zinc and gold passivation and wet paint spray used by other manufacturers, resisting salt spray and stone chips for an ultra long service life. Powder coating can be matched to almost any colour that has a Pantone ® number or similar identification.

For further details of SPAX one-off suspension units write to sales at SPAX giving brief details of your requirements.
