Renault 5 GT Turbo Adjustable Ride height Suspension Kit from SPAX

SPAX Performance Ltd have just released a fully adjustable suspension kit to fit the classic Renault 5 GT Turbo Phase 2 that allows both the damping rate and the ride height to be adjusted.

The **SPAX adjustable suspension kit** for the Renault 5 Turbo is height adjustable at the front using coil over struts with damper rate adjustable shock absorbers at the rear. The kit offers a real improvement in suspension 'feel' and handling, the ability to lower the car to give the stance most owners seek and still offer it at an **affordable price**.

The **SPAX kit contains 2 rate and height adjustable front struts and 2 rate adjustable dampers** with race internals and **race chrome silicon springs for the front**. The use of 2.25" springs allows larger diameter wheels to be fitted if required without fouling the suspension. The front ride height drop is adjustable from 35mm to 60mm.

All damping adjustments can be carried out **on the car** for quick, easy and precise tuning of suspension settings and the ride height can be adjusted by use of the 'C' spanners provided.

The kit will fit Phase 2 Renault 5 GT Turbos made from 1987 to 1990.

SPAX quality is universally well known. **SPAX** is one of the very few British companies (in any field of manufacturing - not just the motor industry!) to have achieved **German TUV approval**.

Each **SPAX** kit is dyno tested to ensure quality and performance before it leaves the factory and all dampers feature the unique **SPAX triple wiper seal design** to ensure a long leak-free life.
