SPAX Adjustable Coil Over Suspension for MG ZS and Rover 45/400

Leading suspension manufacturers SPAX have just released a handling package for the MG ZS and Rover 45/400 consisting of a set of 4 RSX adjustable dampers and a set of height adjustable 'coilover' performance springs.

The race springs are designed to reduce car roll and weight transfer under hard braking and acceleration.

The RSX dampers are fully adjustable with racing internals and offer 28 stage adjustment to suit driver preference and road/track conditions. The damping is somewhat harder than standard which helps eliminate bump steer and gives near perfect performance. Damping characteristics produce a damper with race style performance.

Quality is of prime importance at SPAX. Each and every damper is epoxy powder coated, and fully dyno tested to ensure quality, performance and consistency. SPAX dampers also feature a unique triple oil seal to ensure reliability when the going gets really tough.

For further details of SPAX off road suspension units contact the SPAX Technical Help line on 0906 302 7729 or visit their website... www.spaxperformance.com
