SPAX Adjustable Ride height Coil Over Suspension Kit for Mazda MX5 Mk2 Roadster and Miata

Leading suspension specialists, **SPAX Performance Ltd** have introduced a suspension kit for the Mazda MX5 Mk2/Roadster/Miata. The complete suspension kit has been designed and developed by SPAX motorsport engineers and gives near race-car handling making it suitable for enthusiasts who want to use their cars on the road and to their full potential on the track.

The **SPAX coil over kit** allows full height adjustment of the car front and rear to adjust the centre of gravity and clearance as required.

The **RSX kit contains four 28 stage rate adjustable dampers** with race internals which are matched to **uprated chrome silicon springs** which represent a dramatic improvement over standard specification springs. The 2.25" race style coil springs facilitate the use of large diameter wheels.

The damping adjustments can be carried out **on the car** for quick, easy and precise tuning of suspension settings and the ride height can be adjusted, by use of the 'C' spanners provided, for the tuning of corner weights and centre of gravity. A lowering range between 10mm and 45mm is available.

As with all **SPAX Suspension Kits**, quality is paramount and this is underlined by the fact that SPAX is one of the very few British companies to have achieved **German TUV approval**. Each **SPAX** kit is dyno tested to ensure quality and performance before it leaves the factory. All dampers feature the unique **SPAX triple oil seal design** to ensure a long leak-free life and a final epoxy powder coating ensures a lasting superb finish to complete the ultimate performance package.
