# SPAX SSX Uprated Lowering Springs for Audi A4

One of the first modifications most people make to a car is to uprate the suspension and lower the centre of gravity to improve handling and looks.

The **Audi A4** range is a popular candidate for modification, but as yet there is little on the market for it. So leading suspension specialists, **SPAX Performance Ltd** have introduced a spring kit for this model to allow you to make a start in great style - and at a low cost.

The **SSX kit utilises uprated chrome silicon springs** which represent a dramatic improvement over standard specification springs and lowers the car by approx. 35 mm for better handling and improved looks.

As with all **SPAX products**, quality is paramount and this is underlined by the fact that SPAX is one of the very few British companies to have achieved **German TUV approval**.
